

DAC-105

Dry Film Rust Preventative

Why was DRY FILM developed?

Dry Film was developed to eliminate the high cost of rejected parts and expensive down time from the bleeding and contamination caused by most rust inhibitors on the market today.

Dry Film's unique dry film protection will displace moisture to give you maximum rust and corrosion protection. Dry Film is easily removed by flushing with DAC-103 Universal All Purpose Degreaser or DAC-205 Excel Mold Cleaner.

PERFORMANCE CHARACTERISTICS:

- Color coverage indicator
- Seals against corrosion and prevents moisture without bleeding
- Increases short and long term protection
- Won't leech into ejector, cams or core pins to cause bleeding
- Contains no fillers
- Easy removal

DESCRIPTION:

Dry Film has a unique dry film application that will eliminate all bleeding and contamination on your plastic parts while maximizing short and long term moisture and corrosion protection. Dry Film has the same characteristics as DAC-101 Moisture Guard, with the addition of its unique color coverage indicator. You see exactly where you have sprayed, eliminating any guess work involved. Dry Film will meet and exceed all military and U.S. specifications on the prevention of rust and moisture displacement.
